**RhoTherm™ RTU**

Inhibited Ethylene Glycol Heat Transfer Fluid for Hydronic Heating and Cooling Systems

- Premixed and Ready-to-Use (RTU) System Fluid
- Blended with Virgin Ethylene Glycol and D.I. Water
- Contains Industrial Corrosion and Scale inhibitor Additives
- Protects Multiple Metals, Including Brass, Cast Iron, Copper and Stainless Steel
- Provides Years of Corrosion Protection
- Helps Keep Heat Exchange Surfaces Clean
- Maximizes System Efficiency
- Can Be Custom Blended to Any Glycol % As Needed By Customer
- Customized Freeze or Burst Protection

Available in a variety of container sizes.

Rhomar Water, 2103 E Rockhurst St., Springfield, MO 65802

**DESCRIPTION:**
RhoTherm™ RTU is a premixed VIRGIN ETHYLENE GLYCOL antifreeze and heat transfer fluid specially blended with industrial corrosion and scale inhibitor additives. The glycol % for these customizable Ready-To-Use (RTU) blends can be tailored to your project needs.

**ADVANTAGES:**
RhoTherm™ RTU can be used in hydronic heating and cooling systems. RhoTherm™ RTU can be custom-blended to provide freeze protection and burst protection depending on the customer’s needs. The additives in RhoTherm™ RTU can help protect system metals including brass, cast iron, copper and stainless steel from corrosion and scale deposits.

**DIRECTIONS:**
All systems, new and existing, should be thoroughly cleaned and flushed using Rhomar Water’s Hydro-Solv™ cleaner prior to adding antifreeze. Properly cleaning the system will reduce the rate of corrosion and prolong the life of the antifreeze. RhoTherm™ RTU should be added to a clean system undiluted. Mixing with water will reduce the freeze/burst protection and the corrosion inhibitors.

**NOTICE:**
Any remaining fluid in the system will dilute the RhoTherm™ RTU product resulting in a lower glycol percentage.

**ATTENTION:**
Variations of product color may be caused by manufacturing conditions, UV or sunlight exposure, or mixing with chlorinated water.
